Project InVision Achieves Increased Productivity with Altigen Unified Communications Solutions

Fremont, CA – August 26, 2008 – Altigen® Communications, Inc. (NASDAQ: ATGN), a leading provider of VoIP business telephone systems and unified communications solutions for small-to-medium businesses (SMBs), including companies with multiple distributed locations, announces Project InVision International is achieving increased productivity through enhanced mobility and multisite capabilities available with Altigen unified communications phone systems.

Project InVision International (PII) is a leading provider of business performance improvement solutions to professional services organizations. Its clients include industry leaders, such as PricewaterhouseCoopers, AT&T, EDS, and TELUS. PII's software automates core business processes to help clients manage engagements and initiatives and facilitate governance and compliance. Project InVision software has been implemented at more than 500 service and project intensive businesses with 30,000 seats deployed to manage tens of thousands of engagements worldwide.

PII deployed Altigen's phone system at its corporate headquarters in Novato, California and several remote offices throughout the United States. By connecting the multiple locations with Voice over IP, the company can now give a single unified appearance to customers while saving money on long distance toll charges. Altigen's VoIP enabled, multi-site communications platform with self-administration features significantly reduces PII's monthly phone administrative fees.

"Although the Altigen phone system provides many advanced features, it is very simple to manage," said Matthew Meblin, CEO and co-founder of Project InVision International. "It's very flexible. With a few clicks you can add an extension or change a feature. The system's mobility features have enabled us to improve customer satisfaction by seamlessly routing customer calls to an employee's office extension, cell or home phone when they are away from the office."

"Altigen's unified communications solution is an advantage to companies with many remote employees where we can help businesses realize productivity and cost efficiencies," said Mike Plumer, Altigen's Vice President of Sales. "Distributed, multisite organizations are a perfect example of customers that can truly benefit from our technological expertise and unique product offering. We are pleased Project InVision chose Altigen's unified communications solutions to help them grow their business."

About Altigen Communications
